PREMIUM BIOCHAR

Metzler pureCHAR biochar can be used 10% by volume at the time of compost production; or amend your favorite compost 10% by volume and let percolate together for one to three months. It is not recommended to use biochar in soil that has not been inoculated with biologicals.

BIOCHAR + COMPOST

Metzler growCHAR compost can be used to amend existing soil 25% to 50% by volume. It can also be used as a mulch for hard to grow areas, like grass.

BIOCHAR + TOPSOIL

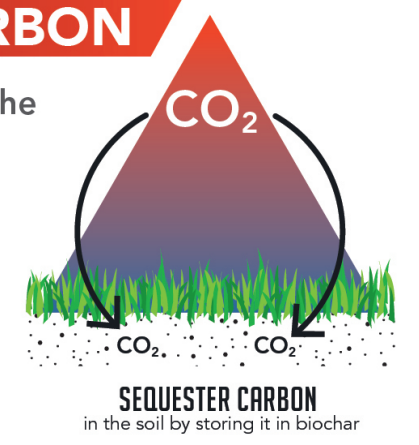

Metzler earthCHAR soil mix is perfect for new raised bed gardens or pots that need soil.

All Metzler biochar products offer superior water holding capacity and nutrient transfer, while sequestering carbon. Biochar is not a fertilizer, so use your favorite fertilizer program.

SEQUESTER ATMOSPHERIC CARBON

Biochar is a very stable form of carbon that can stay in the soil without breaking down for hundreds of years, storing carbon in it's structure and absorbing nutrients and water!

GET THE MOST OUT OF YOUR PLANTS BY TAKING CARE OF THE SOIL & THE PLANET

Do it once, do it right. A promise kept since 1986.
