

100% Pure Organic Biochar

This high-end organic soil amendment produced by pyrolyzing local wood fiber can be added to existing soil 10% to 50% by volume. This carbon amendment is not a fertilizer, so fertilize as normal for improved seed germination and root growth, increased moisture retention, and more nutrient availability provided by increase microbial life. Biochar should not be used as a soil amendment without first being inoculated with biologicals.

SEE OUR BIOCHAR PRODUCTS!

Metzler pureCHAR biochar can be used 10% by volume at the time of compost production; or amend your favorite compost 10% by volume and let percolate together for one to three months. It is not recommended to use biochar in soil that has not been inoculated with biologicals.

Metzler growCHAR compost can be used to amend existing soil 25% to 50% by volume. It can also be used as a mulch for hard to grow areas, like grass.

Metzler earthCHAR soil mix is perfect for new raised bed gardens or pots that need soil.

All Metzler biochar products offer superior water holding capacity and nutrient transfer, while sequestering carbon. Biochar is not a fertilizer, so use your favorite fertilizer program.

SEQUESTER ATMOSPHERIC CARBON

Biochar is a very stable form of carbon that can stay in the soil without breaking down for hundreds of years, storing carbon in it's structure and absorbing nutrients and water!

GET THE MOST OUT OF YOUR PLANTS
BY TAKING CARE OF THE SOIL
& THE PLANET

SEQUESTER CARBON
in the soil by storing it in biochar

Do it once, do it right. A promise kept since 1986.
